BRACINGS OF PRE - ENGINEERED BUILDING

MechaSteel
Project Solutions
Building with vision

Bracing means Tie/Support/Chock used in roof and walls to transfer lateral loads like wind loads, earthquake load, crane load, mezzanine load or longitudinal loads to the foundations. There are different types of bracings in Pre-Engineered Building depends on different types and capacity of loads. It Provides stability to structure.

Pipe Bracing

Rod Bracing

Portal Bracing

Flange Angle Bracing

FLASHINGS AND TRIMS
